

Who we are

With our BryoTechnology, we have pioneered the moss-based production of biopharmaceuticals, opening up unprecedented opportunities for future therapies. We have successfully produced demanding proteins like antibodies and replacement enzymes, and developed candidates into clinical stages. To strengthen our R&D-team in Freiburg i. Br. we are currently recruiting a

Scientist Upstream Process Development (m/f/d)

full time, permanent

Your tasks and responsibilities

- Responsibility for large-scale upstream development (20 L & 200 L wave and 500 L stirred tank reactors)
- Coordination of technical assistants
- Scale-up of production processes into large production scale
- Continuous optimization of established production processes
- Planning and coordination of internal production campaigns
- Development of harvest procedures
- Documentation and maintenance of SOPs
- Process transfer into cGMP-regulated production
- Documentation and presentation of results within the company and at conferences
- Interaction with customers or subcontractors
- Become a proactive member of our R&D Team comprising twelve closely interacting scientists

Your profile

- PhD or Master in Biotechnology or equivalent
- Experience in upstream process development and/or production
- Experience with stirred tanks and/or wave type single use bioreactors is a plus
- Experience in a cGMP environment is a plus
- Hands-on-experience with cell cultivation and fermentation
- Good interpersonal skills and desire to work in a team environment
- Basic knowledge of German

What we offer

- Work on a novel and unique expression system
